

```

#include<iostream>
using namespace std;
class parent
{
    public:
        int a,b,c;
        parent()
        {
            cout<<"enter the two number :";
            cin>>a>>b;
            c=a+b;
            cout<<"Adddition of "<<a<<"and"<<b<<"is :"<<c<<endl;
        }
};
class child:public parent
{
    //int a,b,c;
    public:
        child()
        {
            c=a-b;
            cout<<"subtraction of "<<a<<"and"<<b<<"is :"<<c<<endl;
        }
};
int main()
{
    child obj;

    return 0;
}

```
