```cpp
#include<iostream>

using namespace std;

class abc
{
        int num;
        public:
                void set(int value)
                {
                        num=value;
                }
                void show()
                {
                        cout<<num<<endl;
                }
};
int main()
{
        abc obj, *p;
        obj.set(50);
        obj.show();
        p=&obj;
        p->show();
        return 0;
}
```
